Your Trusted Partner in Automation

Moxa is a leading provider of edge connectivity, industrial computing, and network infrastructure solutions for enabling connectivity for the Industrial Internet of Things (IIoT). With over 35 years of industry experience, Moxa has connected more than 111 million devices worldwide and has a distribution and service network that reaches customers in more than 91 countries. Moxa delivers lasting business value by empowering industries with reliable networks and sincere service. Information about Moxa's solutions is available at www.moxa.com.

MOXA®

Your Trusted Partner in Automation

Providing robust connectivity technologies and superior reliability to futureproof your industrial operations

Moxa is a global leader in industrial networking and communications that enables connectivity and reliability for the automated world of today and tomorrow, and enhances cybersecurity for industrial automation systems. By working together with world-class experts and partners, we transform our customers' unique requirements into practical networking solutions for industrial applications and mission-critical infrastructure.

Providing Crucial Reliability for Critical Environments

Moxa develops reliable connectivity solutions that enable connections and communication between a wide range of automation devices, systems, and processes in challenging environments. Moxa's solutions help customers navigate the challenges of industrial operations in an ever-changing industrial landscape, including extreme weather, cyberthreats, and hazardous environments.

With a "Built to Last" philosophy and over 35 years of experience in data connectivity for industrial automation, Moxa has connected over 111 million devices worldwide and delivered lasting business value by empowering industries with leading-edge connectivity, industrial computing, and communication networks that define a new standard for industrial operations today and tomorrow.

Enabling Connectivity for Automation Networks

Businesses have realized the additional value and opportunities associated with greater cross-system collaboration and integration by converging networks into a single-system architecture based on open standards and technologies. As a result, networking and communications in the industrial automation world have become increasingly sophisticated, but far more complex. With our distinct technical capabilities, values, and decades of expertise that stand out from the competition, Moxa is uniquely positioned to facilitate the transformation towards converged automation networks.

Through collaboration with industry leaders on global industrial automation projects, our connectivity solutions provide superior value to our customers. By ensuring reliable and secure data connectivity, our solutions help drive advanced technologies, transforming industrial automation to enhance productivity and efficiency in applications such as smart grid, smart rail, intelligent transportation systems, smart manufacturing, oil and gas, and marine.

Advancing Industrial Networking and Connectivity

For over 35 years and counting, Moxa has been helping major enterprises around the world take on the challenging and complex demands of their industrial data network projects.

Forging Mobility Ahead

En route to smarter, safer transportation

In our pursuit of excellence, we have established dedicated business and R&D teams specializing in rail, marine, and intelligent transportation systems (ITS). Our vision centers on crafting solutions that transcend the ordinary, addressing the distinctive challenges inherent to each of these demanding and dynamic environments. Embracing the mantra of "Unique Challenges, Tailored Solutions," we are committed to providing resilience in the face of cybersecurity threats, ensuring reliable and secure networks that propel us into the future.

Rail

- Co-developing rail industry standards
- 15+ years of rail experience with dedicated business and R&D teams
- 500+ dedicated rail product solutions
- 1,000+ successful deployments
- Tailored for vital and non-vital applications
- World's first IEC 62443-4-2 Security Level 2 certified onboard security routers

Marine

- Cutting-edge solutions referencing the IEC 62443-4-2, IEC 61162, and IACS UR E26/E27 standards to create a secure foundation for maritime networks
- Solutions to help integrate ship automation and bridge systems for real-time insights to enhance operational efficiency, reliability, and safety
- Collaborating with industry leaders to expand our expertise and reinforce our commitments to maritime advancements

Intelligent Transportation Systems

- Solutions referencing IEC 62443-4-2 to ensure secure and reliable connectivity for roadside infrastructure
- Optimized network maintenance features and intuitive network management software (NMS) to support large-scale ITS deployments
- Robust connectivity solutions compliant with NEMA TS2 and E-Mark designed for advanced traffic management systems

Rewiring the Energy World

Facilitating the energy transition, guiding our journey to a net-zero future

Moxa has been instrumental in the energy transformation driven by efficiency, digitalization, and decarbonization. Working closely with global energy leaders and government entities, we actively contribute to forums like CIGRE, IEC WG, UCAIug, and PAC World. Our mission is to help realize an intelligent global power grid for safer and more efficient energy distribution in an increasingly energy-conscious world.

Substation Automation

Moxa offers comprehensive networking and computing solutions to power substation digitalization, secure IED communications, prevent cyberattacks, and optimize grid dispatching. With over 9,000 substation deployments globally, Moxa pioneered the first smart substation integrating IEC 61850 and IEEE 1588.

Energy Storage

Grid reliability is essential in the era of renewable energy, and Moxa recognizes the crucial role of megawatt-level BESS in achieving this. Moxa's expertise lies in designing robust and reliable networks for large-scale BESS operations, ensuring seamless data flow amidst the global shift to renewables.

Renewable Energy

Moxa's industrial IoT solutions enable intelligent generation and distribution of renewable energy from solar and wind sources. They efficiently manage remote power assets, facilitating easy deployment and integration with local SCADA or cloud-based services.

Critical Power

Moxa provides integrated connectivity solutions for managing high-availability facilities to ensure uninterrupted power supply to vital power loads. Our solutions enable devices—including switchgear, meters, circuit breakers, and UPS controllers—to operate seamlessly and optimize energy loads in such fields as data centers, hospitals, and semiconductor fabs.

Electric Vehicle Infrastructure

Moxa sets itself apart with comprehensive, scalable, and efficient product solutions. We ensure our product offering aligns with the latest trends in the electric vehicle sector by prioritizing network reliability, remote management, cybersecurity, and durability.

Ethernet Switches

Moxa provides a wide range of industrial Ethernet switches that feature industrial-grade reliability, network redundancy, strengthened security, easy management, and competitive price-to-performance ratios. Our comprehensive portfolio includes unmanaged switches, managed switches, PoE switches, rackmount switches, and EN 50155 switches designed for use in the rail industry.

Ethernet Switches Product Pages

13

Unmanaged Switches

Moxa has a large portfolio of industrial unmanaged switches that have been specifically designed for industrial Ethernet infrastructure. Our unmanaged Ethernet switches uphold the stringent standards required for operational reliability in harsh environments.

16

DIN-rail Managed Switches

Our DIN-rail managed switches feature industrial-grade reliability, network redundancy, and security features referencing the IEC 62443-4-2 standard. The compact DIN-rail managed switches have a variety of copper and fiber port combinations that provide customers with greater flexibility when deploying networks.

24

Rackmount Managed Switches

Industrial rackmount switches provide modular flexibility with 24- to 64-port routing and up to 10GbE switching capabilities, security features referencing the IEC 62443-4-2 standard, and millisecond-level, fast multicast traffic redundancy to strengthen IIoT infrastructure such as power, transportation, manufacturing, and surveillance applications.

30

PoE Switches

We provide a wide range of PoE/PoE+/PoE++ switches with up to 90 W output per port to deliver high-speed data transmission while powering high-power devices over long distances. With an industrial-grade design, our PoE switches provide surge protection of up to 4 kV per LAN port. Additionally, Smart PoE management features simplify PoE network deployment and maintenance.

33

EN 50155 Ethernet Switches

Moxa is an IRIS certified company that offers a large portfolio of rugged Ethernet switches that comply with the EN 50155 standard. These products have been deployed in numerous rail and metro systems around the world. With our innovative solutions and technologies, we help train builders achieve overall transport safety, efficiency, and significant cost and time savings on railway operation and maintenance.

Secure Routers

Featuring a broad portfolio, including IEC 62443-4-2 Security Level 2 certified models, our secure routers are the premier solution in the railway and automation industries. Our routers facilitate data connectivity and ensure the highest level of industrial network security through robust security-hardened functions, including intrusion prevention system (IPS), intrusion detection system (IDS), and deep packet inspection (DPI). Additionally, Moxa offers IEC 61375-2-5 Ethernet routers designed to manage traffic between Ethernet Train Backbones (ETB) and Ethernet Consist Networks (ECN).

Secure Routers

Moxa's EDR Series industrial secure routers protect the control networks of critical facilities while maintaining fast data transmission. They are specifically designed for automation networks and are integrated cybersecurity solutions that combine an industrial firewall, VPN, router, and L2 switching functions into a single product that protects the integrity of remote access and critical devices.

43

EN 50155 Routers

TN Series routers are designed for rolling stock backbone networks and include high-performance M12 routers with four bypass relay backbone ports. These routers feature firewall, ETBN, and routing functionality to facilitate the deployment of applications across networks.

Wireless AP/Bridge/Client

Moxa's industrial WLAN AP/bridge/client product portfolios are designed to overcome the challenges of harsh industrial environments. High electromagnetic immunity protects devices against electromagnetic disturbances, power isolation guards them against voltage instability, while wide temperature ranges and shock and vibration resistance ensure reliable operation even in difficult environments.

Wireless AP/Bridge/Client Product Pages

WLAN AP/Bridge/Client

Moxa’s extensive collection of industrial-grade wireless 3-in-1 AP/bridge/client products combine a rugged casing with high-performance Wi-Fi connectivity to deliver a secure and reliable wireless network connection that will not fail, even in environments with water, dust, and vibration.

50

Rail Wireless LAN AP/Client

Moxa’s field-proven wireless LAN products enable operators to manage carriage-to-carriage and train-to-ground communications with increased efficiency, empowering you to deploy reliable train-control operations, video surveillance, and helpful onboard multimedia services that enhance the safety and comfort of your passengers.

52

Rail Wireless Access Controller

Combining advanced controller-based roaming with Turbo Roaming technology and a visualized management interface, Moxa's wireless controllers enhance the reliability of train-to-ground communication and streamline management for improved operational efficiency.

Cellular Gateways/Routers

Moxa's industrial cellular products encompass a wide range of applications, from private 5G networks to public wireless wide area network (WWAN) communications. The burgeoning demand of IIoT has led to a rapid expansion of public WWAN networks, while private 5G networks have swiftly grown and are poised for a promising future. Moxa provides products that offer better security, enhanced stability, and a closer alignment with customer applications to meet specific business needs in a wide variety of scenarios.

Cellular Gateways/Routers Product Pages

5G Cellular Gateways

Moxa’s 5G cellular gateways enable the deployment of 5G networks and facilitate communication with OT subsystems. These compact and power-efficient gateways are compatible with numerous telecom operators and network integrators, making them ideal for industrial environments.

55

LTE Cellular Gateways/Routers

Moxa LTE cellular gateways and routers help minimize potential risks associated with public networks. Stable connectivity supported by both wired and cellular redundancy mechanisms ensure reliable, secure, and versatile communication for remote sites.

Network Management Software

Moxa's industrial network management software enables visibility for operational technology (OT), allowing network operators to make more informed decisions throughout network deployment, maintenance, and diagnostics. Visualization tools empower administrators and operators to quickly assess network status through event notifications, minimizing downtime. The featured modules and functions streamline management and enhance overall network efficiency.

MXview One Central Manager

Centralized Platform for Managing and Monitoring Remote MXview One Sites

MXview One Central Manager offers administrators a centralized platform that automatically consolidates the status and events from all of their remote MXview One sites, providing comprehensive visibility.

- Intuitive dashboard to easily monitor site status
- Remotely view and access MXview One sites
- Real-time events and notifications
- Scheduled custom report generation
- Flexible license allocation and management

MXview One

Next-generation Scalable Industrial Network Management Platform

MXview One provides an integrated management platform that can discover networking devices and SNMP/IP devices installed across subnets. With comprehensive, real-time visibility of wired, wireless, and IEC 61850 substation networks, MXview One helps OT engineers simplify management of converged IT/OT networks and optimizes operations and availability throughout all stages of network deployment, management, and maintenance.

- Security View for checking the security level of network devices
- Dashboard with a complete network summary
- SFP Fiber List for fiber link status and warnings
- Run Scripts for mass configuration on devices
- Serial Port Monitoring for serial port event warnings
- Easy integration through RESTful API, web widget, and syslog for single-pane monitoring with other IT/OT applications
- User-defined third-party SNMP device plug-in to define OIDs monitored in MXview One
- Firmware Management for firmware visibility and multi-mode upgrades

MXview Power

Add-on Tailored for Power Networks

- Visibility of PRP/HSR dual LAN topologies
- Instant visibility of GOOSE messages for troubleshooting
- Automatic scanning and detection of unauthorized IEDs

MXview Wireless

Add-on Tailored for Wireless Networks

- Dynamic topology view for Wi-Fi networks
- Client roaming playback for troubleshooting
- Device dashboards and performance charts for wireless devices

MXview Security

Add-on Tailored for Network Security

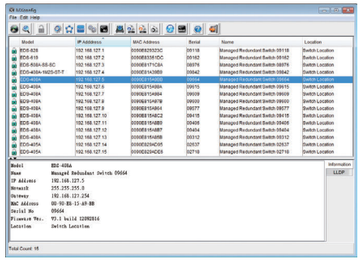
- Centrally manage and deploy firewall policies, IPS patterns, and cybersecurity packages
- Cybersecurity event monitoring and customizable notifications
- At-a-glance cybersecurity event dashboard

MXconfig Industrial Network Configuration Tool

Mass Configuration to Effectively Reduce Setup and Maintenance Costs

Moxa's MXconfig is a comprehensive Windows-based utility that is used to install, configure, and maintain multiple Moxa devices on industrial networks. MXconfig gives device installers and control engineers a powerful and easy way to mass configure devices while effectively reducing setup and maintenance costs.

- Set the IP addresses of multiple devices with one click
- Configure redundant protocols and VLAN settings
- Modify the network configurations of multiple Moxa devices
- Upload firmware to multiple devices
- Set up security-related parameters with the Security Wizard in just a few clicks



MXsecurity Industrial Network Security Management Software

Mass Deployment of Policy Rules, IPS Patterns, and Cyberthreat Monitoring

MXsecurity is cybersecurity management software tailored for Moxa Router/Firewall users, saving substantial time for Operational Technology (OT) users deploying firewall rules and reducing the risk of misconfiguration. Furthermore, MXsecurity features an easy-to-understand dashboard that visually represents cyberthreats within the network, thereby decreasing the cost required for clients to analyze logs.

- At-a-glance dashboard of cyberthreat events
- Centralized deployment of secure router firewall policies, firmware, configurations, and IPS signatures
- Automatic IPS pattern upgrades from the Moxa firmware server
- Real-time alerts with email notifications
- Map View for real-time location monitoring
- Scheduled batch deployment and reports

Secure Remote Access

Moxa Remote Connect gives you a secure, easy-to-deploy, flexible, and scalable remote access solution that enables you to remotely configure, maintain, and troubleshoot your devices. It empowers machine builders by creating new business models for them to expand their services and keep their customers satisfied.

Moxa Remote Connect Suite

Effortless Access to Your Remote Equipment

Moxa Remote Connect (MRC) is a convenient, secure, and versatile networking solution designed to seamlessly bridge field devices and engineers together over the Internet for industrial applications. Moxa Remote Connect Suite consists of three primary components:

1. MRC Server: A secure cloud-based remote access platform. This centralized connection management platform handles security levels, user privileges, and configuration of the MRC Gateway and MRC Client.

2. MRC Gateway: A Moxa device that supports MRC functionality, allowing secure remote access to local devices via the MRC Client.

3. MRC Client: Windows software enabling engineers to connect to remote devices from their laptops.

Highlights

- User-friendly experience that doesn't require specialized IT knowledge.
- Provides scalable solutions for distributed applications, capable of supporting expansion to thousands of devices.
- Integrates easily with existing security policies to minimize configuration workload.
- Simultaneous connections to multiple field machines through a virtual IP mapping scheme.
- Secure on-demand access control, managed centrally or by remote site operators, with configurable connection times.
- Supports international applications by choosing the most efficient connection pathways and point-to-point connections.

User Scenarios

The MRC Suite supports multiple connection types and provides numerous benefits. Below are three examples where the Moxa Remote Connect Suite can benefit engineers and businesses.

◆ On-demand Remote Maintenance, Diagnosis, and Troubleshooting

To minimize security issues and reduce costs, Moxa Remote Connect allows engineers to establish remote connections only when necessary.

◆ Remote Monitoring Minimizes On-site Maintenance

Moxa Remote Connect helps engineers monitor the status of equipment operating at remote sites. Continuous monitoring of equipment status allows engineers to make adjustments to settings remotely, reducing the need for site visits to troubleshoot and fix on-site issues.

◆ LAN-like Site-to-site Secure Network Infrastructure

Moxa Remote Connect enables communication between different machines even if equipment is not in the same location. With Moxa Remote Connect, equipment can communicate as though it were communicating over a local area network (LAN).

Product Portfolio

MRC Gateway

A Moxa device that supports MRC functionality, allowing local devices at remote sites to be accessed securely by a MRC Client.

- Remote connection control managed by inserting a USB or digital input signal
- Configurable remote access permissions based on client and application
- Each gateway supports up to 25 local devices

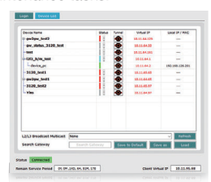
MRC Server

Cloud-based connection management platform that provides a centralized management portal for users.

- Supports device and permission grouping for multi-client device management
- Includes a 3-year free basic connection service
- Two-factor login authentication

MRC Client

Software to connect engineers to the MRC Server, enabling them to perform remote troubleshooting and maintenance tasks.



- Windows-based connectivity and control software
- Supports Microsoft Windows 10 (32/64-bit)
- Download for free from Moxa's website

Network Security Appliance

Moxa's Network Security Appliances are designed to protect your critical industrial assets from industrial cybersecurity threats with OT/IT integrated cybersecurity technologies such as OT-centric Deep Packet Inspection (DPI) and Intrusion Prevention System (IPS).

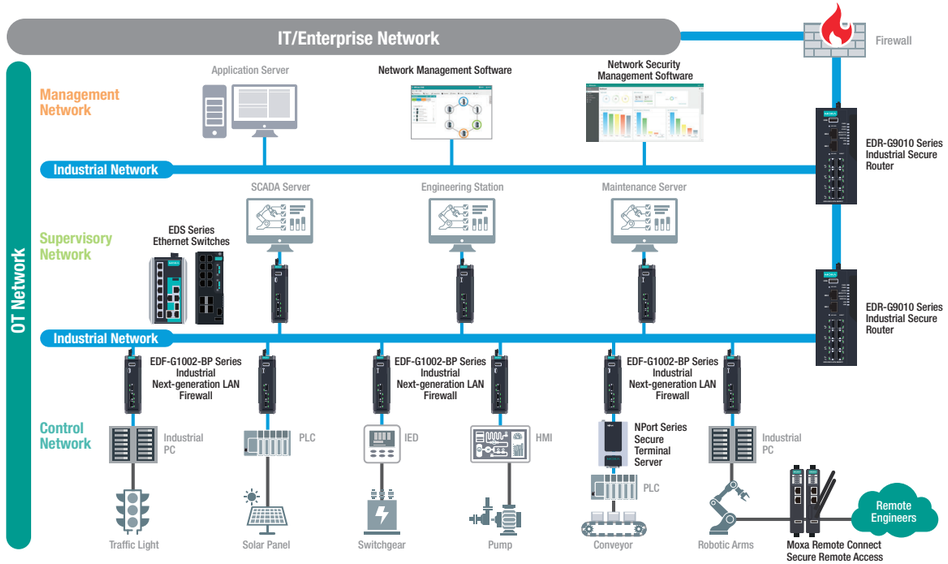
OT/IT Integrated Security

Protect OT Assets From Cyberthreats and Mitigate Cyber-risks

Introducing a new class of product—the Network Security Appliance—that protects industrial networks from intruders and unwanted traffic. Network Security Appliances are specifically designed to secure industrial networks from both an Operational Technology (OT) and Information Technology (IT) perspective to better address the surging market demand for comprehensive cybersecurity solutions for industrial networks. Moxa's solution includes critical IT cybersecurity technologies such as an Intrusion Prevention System (IPS), a key component for defense-in-depth strategies, specifically tailored to protect OT networks from cyberthreats without disrupting industrial operations.

- **EDR-G9010/8010:** Secure router combo switch and firewall, provides routing between different networks and VPN for secure remote access.
- **EDF-G1002-BP:** Industrial next-generation LAN firewall, protects critical assets against horizontal cyberthreats inside the LAN network.
- **MXsecurity:** Network security management software, provides central management of the EDF-G1002-BP Series and EDR-G9010/8010 Series with visibility of critical assets, network analysis, and pattern updates.

Defend Industrial Networks at All Levels



EDF-G1002-BP Industrial Next-generation LAN Firewall

Highlights

- Out-of-band management port minimize installation impact
- Software-configurable Gen3 LAN Bypass prevents single point of failure
- Industrial-grade Intrusion Prevention/Detection System (IPS/IDS)
- Examine industrial protocol data with Deep Packet Inspection (DPI) technology
- Stateful firewall protects critical assets
- Supports secure boot for checking system integrity
- Check firewall settings with the intelligent Security Check feature
- -40 to 75°C operating temperature range (-T model)
- Supports conformal coating (-CT model)

Introduction

The EDF-G1002-BP Series is an industrial-grade LAN firewall with IPS and DPI functions to protect mission-critical assets and zones, specifically for intra-LAN east-west communications. These industrial firewalls provide software-configurable Gen3 LAN bypass functions to achieve bump-in-the-wire installation and minimize the installation impact for industrial applications, such as ITS, pump-and-treat systems in water stations, distributed control systems in oil and gas, and PLC/SCADA systems in factory automation.

Intrusion Prevention System (IPS)

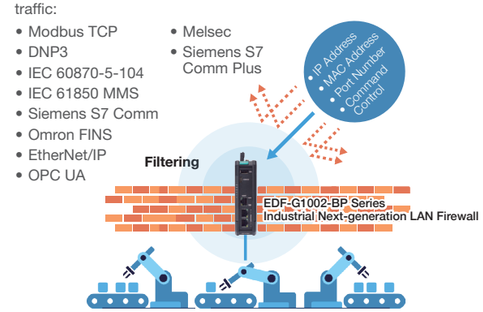
The EDF-G1002-BP features IPS functions allowing you to apply virtual patches for vulnerabilities in legacy devices and protecting against abnormal web threats.

EDF-G1002-BP Series
Industrial Next-generation LAN Firewall

Deep Packet Inspection (DPI)

The EDF-G1002-BP extends DPI to the following OT protocols to filter content and help mission-critical infrastructure fend off malicious traffic:

- Modbus TCP
- DNP3
- IEC 60870-5-104
- IEC 61850 MMS
- Siemens S7 Comm
- Omron FINS
- EtherNet/IP
- OPC UA
- Melsec
- Siemens S7 Comm Plus



Serial Device Servers

With a portfolio of over 500 serial connectivity products, Moxa has been committed to providing reliable industrial solutions for device connectivity since 1987.
As a worldwide industry leader, our portfolio includes products with industry-specific certifications for harsh environments, rail applications, intelligent transportation systems, and power automation.

Secure Terminal Servers

Moxa's terminal servers have specialized functions for serial communication and cybersecurity features, which enable the establishment of secure and reliable terminal connections to networks. The terminal servers connect a variety of devices, including terminals, modems, data switches, mainframe computers, and POS devices, making them accessible to network hosts and processes.

75

Combo Switch / Serial Device Servers

Moxa’s NPort S8000 Series combines a serial device server and a full-function managed Ethernet switch, allowing you to save space in your cabinet, reduce overall power consumption, and lower costs by eliminating the need to purchase and deploy separate devices.

76

Substation-level Device Servers

The NPort S9000 Series device servers come with a built-in full-function managed Ethernet switch, and they are specifically designed for the harsh environmental conditions found in electrical substations.

78

Railway Device Servers

The NPort 5000AI-M12 complies with EN 50121-4 and all mandatory sections of EN 50155, covering operating temperature, power input voltage, surge, ESD, and vibration, making it suitable for rolling stock and wayside applications.

79

General-purpose Device Servers

Our NPort device servers make your serial devices network-ready in an instant. This series offers from 1- to 16-port options, making the device servers ideal for connecting devices such as power meters and serial instruments to an IP-based Ethernet LAN, from lightweight remote site applications to high-density cabinet/rack systems.

85

Industrial-grade Device Servers

These industrial device servers offer enhanced surge protection and reliable serial-to-Ethernet connectivity when operating in harsh environments, such as oil and gas, power automation, and marine.

86

Wireless Device Servers

Our wireless device servers are the ideal choice for connecting your serial or Ethernet devices—such as PLCs, meters, and sensors—to a wireless network, avoiding the hassle of running a network cable to each device.

87

Embedded Device Servers

Moxa’s embedded serial-to-Ethernet device server modules are compact, power-efficient, and easy to integrate.

Serial Converters

Moxa's serial media converters enable devices with different serial interfaces to communicate effortlessly. Serial-to-serial converters help convert between RS-232 and RS-422/485; serial-to-fiber converters convert all three interfaces to optical fiber.

Serial Converters Product Pages

Chassis Media Converters

Our TRC Series of rackmount chassis media converters offer up to 19 slots and a range of media converter modules to meet your diverse media conversion needs in high-density applications.

91

Serial-to-fiber Media Converters

Moxa's industrial-grade serial-to-fiber optic converters convert RS-232/422/485 to optical fiber, providing users with an easy and reliable way to communicate with their serial devices.

92

Serial-to-serial Converters

Moxa's serial-to-serial media converters ensure seamless communication between RS-232 and RS-422/485 interfaces, avoiding compatibility issues that are often encountered when communicating between different serial interfaces.

93

CAN-to-fiber, PROFIBUS-to-fiber Converters

Moxa's fieldbus-to-fiber converters make fieldbus-to-fiber conversion easy. They also feature easy configuration and effortless troubleshooting. Our industrial-grade ICF converters can handle CAN-to-fiber and PROFIBUS-to-fiber conversions, even in harsh settings.

Protocol Gateways

Our fieldbus-to-Ethernet MGate gateways do more than just link serial devices to Ethernet networks–they also facilitate multiple connections and protocol conversions, helping you handle large volumes of data. The MGate supports various protocols, including Modbus TCP, PROFINET, EtherNet/IP, IEC 61850, CAN, EtherCAT, and more, catering to energy and industrial automation applications.

USB-to-serial Converters/USB Hubs

Moxa's UPort Series of USB-to-serial converters provides SuperSpeed USB 3.2 and Hi-Speed USB 2.0 interfaces. Moxa's USB hubs provide SuperSpeed USB 3.2 speeds up to 5 Gbps. Both come with 15 kV of ESD protection and metal housing to endure harsh environments, making them ideal for ATMs, kiosks, POS stations, and data acquisition applications.

USB Hubs Product Pages

USB-to-serial Converters

Moxa's UPort USB-to-serial converters provide computers with high performance, industrial-grade connections for up to 16 serial devices over a single USB port. A wide range of converters are available with features that include SuperSpeed USB 3.2 and Hi-Speed USB 2.0, advanced UARTs for high-end serial performance, COM port mapping, fixed-base COM functionality, and more.

Industrial-grade USB Hubs

The industrial-grade UPort Series of USB hubs is designed with the ruggedness and reliability needed for industrial applications. Each port has ESD Level 4 protection and provides SuperSpeed USB 3.2 data rates up to 5 Gbps—even for heavy-load applications. In the UPort Series, you'll find models that have dual power inputs, DIN-rail mounting options, and wide temperature ranges to operate reliably in harsh conditions.

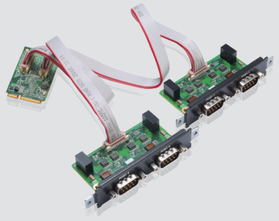
Multiport Serial Boards

Backed by over thirty years of experience in multiport serial board technology and development, Moxa stands out in the market with its vast selection of industrial-grade multiport serial cards. Moxa offers serial boards for a variety of slot types, including Mini PCIe, PCI Express (PCIe), Universal PCI, and PC/104.

Multiport Serial Boards Product Pages



107

PCI Express (PCIe) Serial Boards

Our PCI Express boards are designed for factory automation, kiosk, and ATM applications, and they are a top choice of industrial automation engineers and system integrators. They support many operating systems, including Windows, Linux, and even UNIX.

110

Universal PCI Serial Boards

Our Universal PCI serial boards are designed for factory automation, kiosk, and ATM applications, and for use by industrial automation system manufacturers and system integrators.

112

CAN Interface Boards/Modules

Moxa's CANbus serial boards are the culmination of over 30 years of experience in fieldbus interface boards. These serial boards are rugged, high-quality CAN interface modules that come with features such as ESD surge protection and long-term driver support.

Controllers and I/Os

Moxa provides a wide range of controllers and I/O products for industrial automation applications. Our devices are built with push technology to facilitate faster I/O response times while still ensuring accurate data collection. Moxa's Click&Go Plus simplifies configuration of control logic rules and provides support for multiple OT/IT protocols, making it easier for you to realize your IIoT application. Our products have been successfully deployed in factories, energy and transportation applications, and city infrastructure.

Controllers and I/Os Product Pages

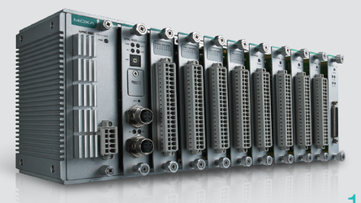
Advanced Controllers and I/Os

Moxa's advanced controllers and I/O products make it easier to realize complex IIoT applications, such as energy management, factory machine management, transportation management, and remote asset management, through expandable communication and high-performance data acquisition and control capabilities.



119

Rugged Controllers and I/Os

Rail, wind power, and offshore applications demand system reliability and stability, even in harsh environments. Our rugged controllers and I/O products are designed to perform in extreme conditions while providing versatile data acquisition and control capabilities.

129

Universal Controllers and I/Os

Our universal controllers and I/O products use Click&Go control logic, and include our patented active monitoring technology and support for a versatile set of OT/IT protocols to help you easily configure, deploy, and realize IIoT applications such as energy monitoring, facility monitoring, and machine OEM applications.

Advanced Controllers and I/Os

Product Series	ioThinx 4533-LX(-T)
Computer	
CPU	Armv7 Cortex-A7 dual-core 1 GHz
OS	Moxa Industrial Linux 3
Clock	Real-time clock with capacitor backup
DRAM	2 GB DDR3
MRAM	128 kB
Storage Preinstalled	8 GB eMMC (5 GB reserved for the user)
Storage Slot	1 x microSD slot (32 GB max.)
Expansion Slots	Up to 64 (with 45MR I/O modules) Up to 5 (with 45ML communication modules)
Control Logic	
Language	C/C++, Python
Ethernet Interface	
10/100BaseT(X) Ports (RJ45 Connector)	2, 2 MAC addresses
Magnetic Isolation Protection	1.5 kV (built-in)
Serial Interface	
No. of Ports	1 x RS-232/422 or 2 x RS-485-2w
System Power Parameters	
No. of Power Inputs	1
Input Voltage	12 to 48 VDC
Field Power Parameters	
No. of Power Inputs	1
Input Voltage	12/24 VDC

OPC UA Software

Moxa's OPC UA software works with our ioLogik remote I/O products to maximize the efficiency of data collection from remote devices. By leveraging the power of our patented active monitoring technology, the OPC UA software delivers faster response times and bandwidth savings.

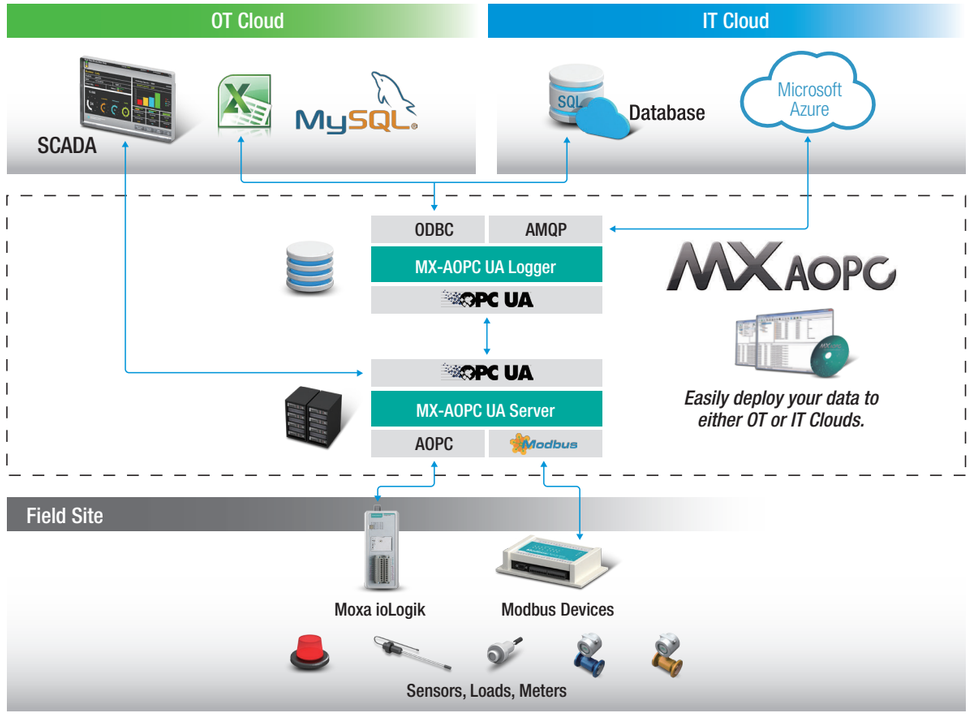
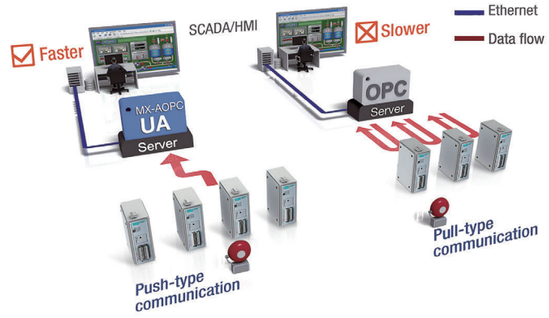
Create a Secure Data Connection Between OT and IT Systems

Traditionally, it has been difficult for OT and IT engineers to write agent programs to poll the thousands of registers used for shop-floor data. The difficulty stems from the fact that shop-floor data is handled using fieldbus protocols, but the data needs to be written to an IT database. The difficulties are compounded considerably when it comes time to scale up a facility, particularly since the additional load created can put a tremendous strain on systems that rely on legacy data acquisition methods. MX-AOPC UA Suite can be used to collect data from shop-floor registers via a Modbus protocol. The data can then be provided to an OPC UA client, such as a SCADA system, or MX-AOPC UA Logger can be used to write the data to an IT database, all without the need for additional programming effort. As an added benefit, MX-AOPC UA Suite provides security policy options for encryption and certificate exchange to ensure the security of data connections and transmissions.



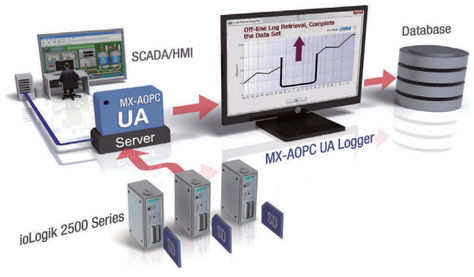
Efficient Data Acquisition Through Push-type Transmission (report by interval or exception method)

Our patented MX-AOPC UA Server offers both polling and non-polling architectures alongside the standard OPC UA protocol, giving users the alternative of using push-based communication from Moxa's devices. With push technology, I/O status is updated to MX-AOPC UA Server only when there is an I/O status change, a preconfigured interval is reached, or when a request is issued by a user. This application of push technology cuts metadata overhead, resulting in faster I/O response times and more accurate data collection than traditional pull-based architectures.



Automatic Data Supplement From SD Cards Following Network Failures

One of the benefits of using RTUs is that data can be collected over a network from a central site. In an ideal operation, following a network failure, RTUs should be able to transmit data logs that were collected while the network was offline. Moxa's MX-AOPC UA Logger makes this not only possible, but easy. MX-AOPC UA Logger provides a standard OPC interface that interacts with MX-AOPC UA Server for real-time data collection. After each network connection, MX-AOPC UA Logger will compare historical data stored on the SD cards located in individual devices with the real-time data it has already stored locally, and then supplement any missing data by requesting that the RTU retransmit the lost data.



OPC UA Software supports the following devices:

IP Cameras & Video Servers

Moxa's industrial-grade IP surveillance offering includes a range of IP cameras and industrial video servers designed to serve a broad spectrum of industries. They deliver the reliable, high-quality video performance and security standards needed for applications in demanding and unpredictable environments.

Video Servers

Moxa's industrial video servers are designed to perform reliably even in harsh environments, making them ideal to serve as the core of a remote monitoring or surveillance solution. Our video servers are capable of using efficient H.264 video compression and allow for easy integration of CCTV cameras into your IP surveillance solution.

Industrial Computing

Moxa offers an extensive range of industrial-grade, fanless computers for tough environments. These products are built to operate reliably in extreme conditions, such as continuous exposure to extreme temperatures, humidity, vibration, and power surges. Our products have been successfully deployed in automation systems for heavy industries, substations, solar energy management, battery energy storage, water/wastewater management, transportation, oil and gas, and marine vessels.

Industrial Computing Product Pages

x86 Computers

Moxa's x86 industrial-grade fanless computers have passed rigorous tests and strictly adhere to industrial standards to ensure they can provide long-lasting, reliable operation even in harsh environments, making them perfect for a variety of industrial automation applications.

143

Arm-based Computers

Moxa's Arm-based compact fanless industrial-grade computers are wireless-ready and come with comprehensive security features. They are built for space-critical applications. The computers are specifically designed for long-term operations and come with both a 5-year hardware warranty and 10-year support for Moxa Industrial Linux, making them an ideal choice for remote monitoring and data acquisition applications.

151

EN 50155 Computers

Moxa's EN 50155 computers offer reliable connectivity for automation systems and devices. These computers are equipped with a rich set of interfaces and M12 connectors for stable connections in vibration-prone environments. The computers comply with EN 50155 mandatory test items and are certified for shock and vibration resistance using industrial-grade testing. The rugged design makes them an ideal choice for transportation applications.

158

IEC 61850-3 Computers

Moxa's IEC 61850-3 computers deliver stable and reliable systems for power applications. These computers are designed based on the IEC 61850-3 standard, making them capable of withstanding high EMI/EMC interference. The computers efficiently handle high-speed, low-latency communications for large data transfers. Their redundant power supply design ensures continuous system availability for power infrastructure.

159

IIoT Gateways

Moxa's IIoT gateways facilitate rapid entry into the IIoT world. The gateways are secure, reliable, and easy-to-use sensor-to-cloud IIoT solutions that can effortlessly transform data into actionable insights. Our robust and ready-to-deploy IIoT gateways, with value-added functions for reducing programming efforts, are ideal drivers of digital transformation in IIoT systems.

160

Panel PCs

Moxa's industrial-grade panel PCs are built to withstand the elements and feature a ruggedized design that make them ideal for HMI applications in outdoor, hazardous, rail-onboard, and marine environments. Certifications include CID2, ATEX Zone 2, IECEx, and DNV.

Moxa Industrial Linux (MIL)

Moxa Industrial Linux (MIL) is a robust, Debian-based Linux distribution tailor-made to provide security, reliability, and ease of deployment for a variety of industrial applications. MIL provides 10-year extensive support, including security patches and bug fixes, ensuring long-term stability for smart city and industrial sectors like power, water, oil and gas, transportation, and factory automation.

MIL Product Page

Moxa Industrial Linux

- **Secure Boot with Hardware Root of Trust**
- **Overlay filesystem that prevents system crashes**
- **Automatic system recovery to maintain data integrity during failures**
- **Unified command line interface (CLI) to manage I/O interfaces on Moxa computers**
- **Extensive 10-year support including critical security patches**
- **Automated network failover and connection keep alive functions**

Building Secure Systems With Moxa's Arm-based Computers

Moxa computers with MIL3 provide a secure and dependable foundation for developing your industrial applications.

Customer-developed Applications

Utilities & Libraries
- Network connection and management tool
- Middleware for I/O communication and control
- Security tools (HIDS, diagnostic tool, and firewall)
- Backup and recovery tool

Secure Operating System
- Secure Boot with Hardware Root of Trust
- Secure by default
- Crash-proof encrypted filesystem
- 10-year life-cycle support

Hardware
- Trusted platform module (TPM)
- Secure screws and seal
- 5-year warranty
- -40°C to 70°C operating temperature with wireless
- CID2 and ATEX Zone 2 certifications

Save Time and Reduce Costs With Moxa

Save 6 months

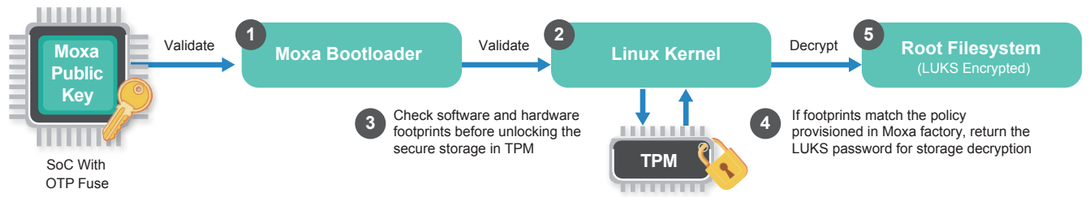
worth of security validation costs and reduce certification costs for add-on software.

IEC 62443-4-1 Certified Development Life-cycle

Moxa Industrial Linux (MIL) was built from the ground up using an IEC 62443-4-1 certified secure development life-cycle (SLDC) process, integrating robust security at every stage of the development process. MIL's comprehensive security features ensure reliable and safe networking in any type of industrial network setting.

Secure Boot

A one-time programmable (OTP) fuse in the CPU establishes a Hardware Root of Trust to authenticate the bootloader and kernel during bootup before granting access to the root filesystem.



Automatic System Failback

The system is automatically restored to the last-known secure working state when it fails to boot up.

Accessories

Moxa provides a wide range of accessories that include wireless antennas, backup configurators, fiber optic adapters and fiber bypass units, PoE injectors and splitters, power supplies and adapters, SFP modules, and mounting kits. All of these accessories play an important role to complement Moxa's industrial solutions and help guarantee reliable performance.

171

Wireless Antennas and Cables

Moxa offers a wide variety of cellular and WLAN antennas and cables that are easy to install and simplify the process of establishing wireless networks.

178

Backup Configurators

These automatic backup configurators are designed to perform configuration backup and restoration for Moxa's managed Ethernet switches, wireless AP/bridge/client devices, routers, and LAN firewalls.

178

Fiber Optic Adapters and Bypass Units

Our fiber optic adapters are optional accessories that provide more fiber optic connection options for Moxa's industrial Ethernet switches. In addition, Moxa's fiber bypass units add bypass relay functionality to any network node.

178

PoE Injectors and Splitters

Moxa's PoE injectors combine power and data over a single Ethernet cable and provide non-PoE power source equipment (PSE) the ability to supply power to powered devices (PD). In addition, Moxa PoE splitters give non-PoE powered devices (PD) the ability to pair PoE Power Sourcing Equipment (PSE).

196

EtherCAT Automation Devices

Moxa's EtherCAT junctions are designed to empower industrial applications with high-speed, cost-effective, and deterministic EtherCAT technology. Featuring superior reliability for non-stop operations and a compact size for flexible deployment, these devices help build flexible EtherCAT topologies.

179

Power Supplies and Adapters

In order to ensure that space and power source input/output requirements for industrial control systems are met, Moxa offers a wide variety of power supplies and adapters.

187

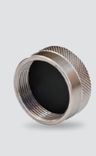
SFP Modules

These small form-factor pluggable transceiver (SFP) Ethernet fiber modules support Fast Ethernet, Gigabit Ethernet, 2.5 Gigabit Ethernet, or 10 Gigabit Ethernet. They facilitate coverage across a wide range of communication distances.

189

Mounting Kits

Moxa's versatile mounting kits include options for desktop, wall, DIN-rail, VESA, and rack mounting, and have been designed to simplify installation of products in a variety of industrial environments.



191

Caps, Cables, and Connectors

Our caps and connectors include a selection of pin and code types with high IP ratings to ensure suitability for industrial environments. Our cables come in a variety of lengths and pin options to ensure compatibility for a wide range of applications.

197

Other Accessories

These accessories include HDD/SSD kits, data line surge protectors, and Wi-Fi modules.

Interfaces	4 x 100BaseT(X) ports (RJ45 connector)	8 x 100BaseT(X) ports (RJ45 connector)
Switch Properties		
Port Combination	1 (IN), 3 (OUT)	1 (IN), 7 (OUT)
Port Delay	1 µs per port (approximately)	
Rotary Switch Configuration		
ID Selector	Valid address range: 1 to 4095	
Power Parameters		
Input Voltage	12/24/48 VDC	
Physical Characteristics		
Housing	Metal	
Installation	DIN-rail mounting, Wall mounting (with optional kit)	
Environmental Limits		
Operating Temperature	Standard models: -10 to 60°C (14 to 140°F) Wide temp. models: -40 to 75°C (-40 to 167°F)	
Standards and Certifications		
Safety	UL 61010-2-201, EN 62368-1	
EMC	EN 55032/35, EN 61000-6-2/-6-4	
EMI	CISPR 22/32, FCC Part 15B Class A	

Other Accessories

Model Name	Description
ANT-GPS-OSM-05-3M	1572 MHz, active GPS antenna, 26 dBi, for GPS applications, 3 m
DA-720 HDD Kit	DA-720 HDD/SSD kit
DE-2-SATA	2 x 2.5” SATA III SSD/HDD socket module
HDD kit with lock	HDD/SSD kit (lock included)
HDD/SSD kit with heat dissipation vent (lock not included)	HDD/SSD kit with heat dissipation vent (lock not included)
HDD/SSD kit with heat dissipation vent and lock	HDD/SSD kit with heat dissipation vent (lock included)
ISD-1110-T/1130-T Series	Data line surge protectors (up to 4 kV)
ISD-1210-T/1230-T Series	Data line surge protectors (up to 20 kV)
Wi-Fi-BGN	Wi-Fi module, 2 SMA connectors with cable
Wi-Fi-BGN(252NI)	Wi-Fi module, 2 antennas with cable and connector, 2 black screws, 2 lock washers, 2 nuts, 1 thermal pad

Build a Robust and Secure Network With Moxa

Given rising cyberthreats and tighter government regulations, how well-prepared are your industrial networks for rapid environmental shifts and minimizing operational disruption? As one of the first companies globally to receive IEC 62443-4-1 certification for our secure development life-cycle (SDL) and IEC 62443-4-2 certification for multiple networking products, Moxa has over 35 years of experience in helping industrial automation customers build a reliable industrial network. We understand your demands on achieving increased network uptime and reduced security risks. Our secure networking solutions, including switches, routers, firewalls, and network management software, allow you to easily enhance network security and reliability with minimal impact on existing industrial operations.
